

# Socio-Economic Vulnerabilities to Drivers of Ecosystem Change

---

Lisa A. Wainger and Elizabeth W. Price  
King and Associates, Inc.  
Solomons, Maryland

*Funded by: US EPA ReVA Program*

## Questions to Address:

- 1. What issues strongly link household and government concerns to ecosystem vulnerabilities?**
- 2. Can we objectively define measures that are resource-related and controllable?**
- 3. Can we measure these factors at the regional scale? with available data?**

## Approach

- Current status of socio-economic conditions and quality of life State
- Leading indicators of population redistribution and changing demographics / development type Pressure
- Implications for managing land use and natural resources Response

## Quality of Life Indicators

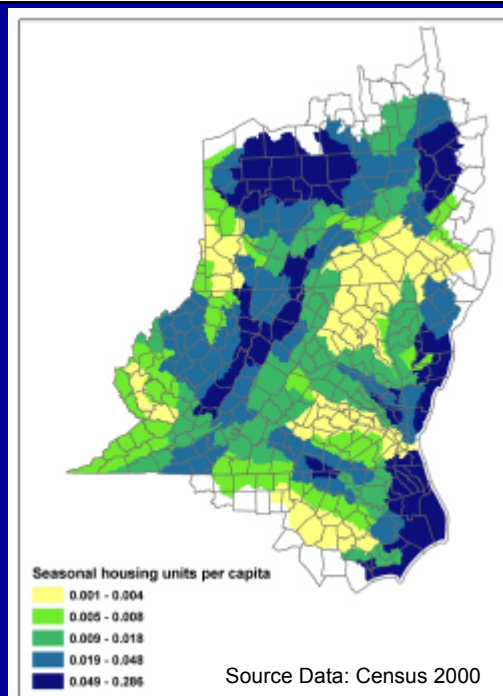

- Household Economic Condition
  - Adequate Income & Job Options
  - Housing Affordability and Home Values
- Health
  - Air, Water, & Land Pollution
  - Safety (Food, Personal)
- Natural Amenities contributing to Quality of Life
  - Open space, parks, recreation options
- Vibrant community
- Protection from Future Risks

## Data Sources

- US Census: Population, Economic, Agricultural
- Bureau of Economic Analysis
- Conservation Biology Institute
- ReVA partners (Josh Lawler, US EPA)
- Private databases: IMPLAN, Woods & Poole
- USGS

### Measurement Units and Reaggregation

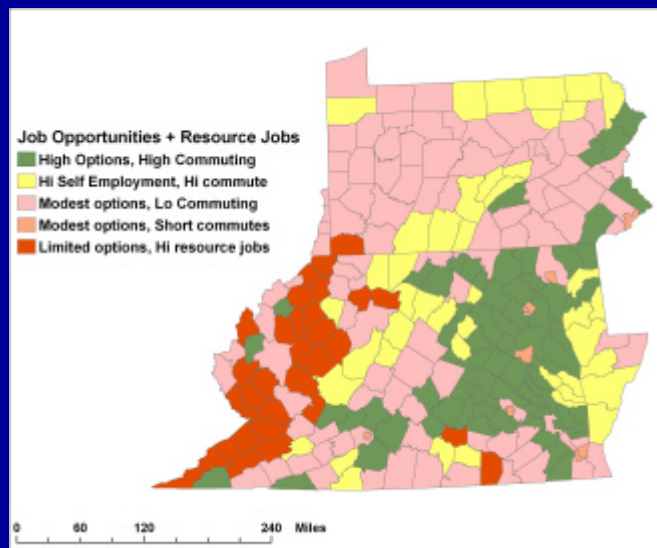

Seasonal Housing Units per Capita within Watersheds (quintiles)

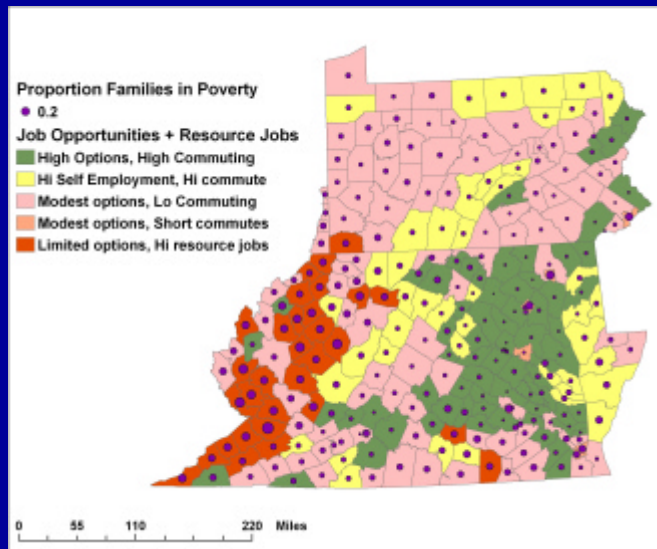

# Job Opportunities

- Unemployed
- Professional Occupations
- Self-employed
- Diversity of jobs
- Travel time to work
- Net commuting
- Resource Jobs (agriculture, fisheries, forestry)
- Per capita income

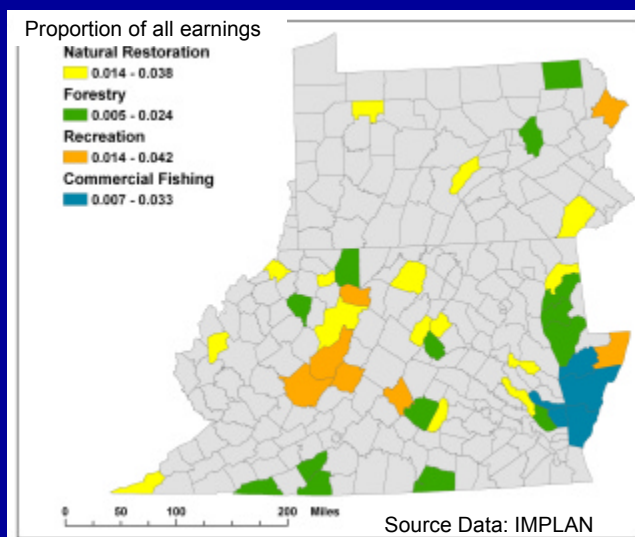

## Job Opportunity Ratings

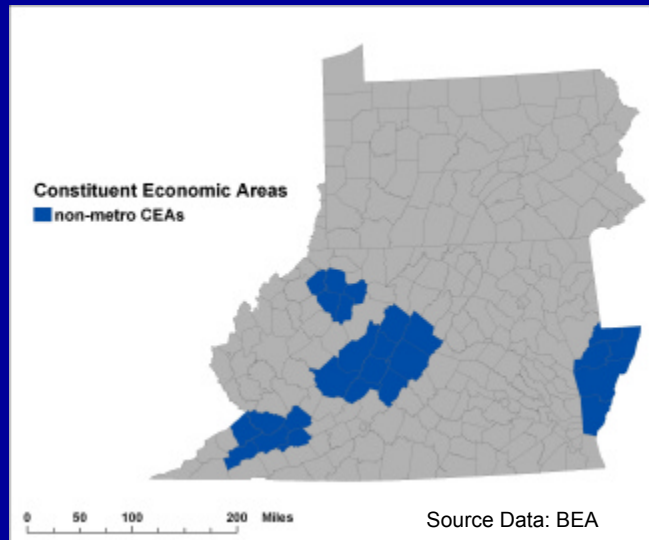

## Job Opportunity Ratings Compared with Proportion Families in Poverty

## Direct Economic Dependence on Natural Resources (Top quintile of resource dependence)

## Economically Isolated Areas

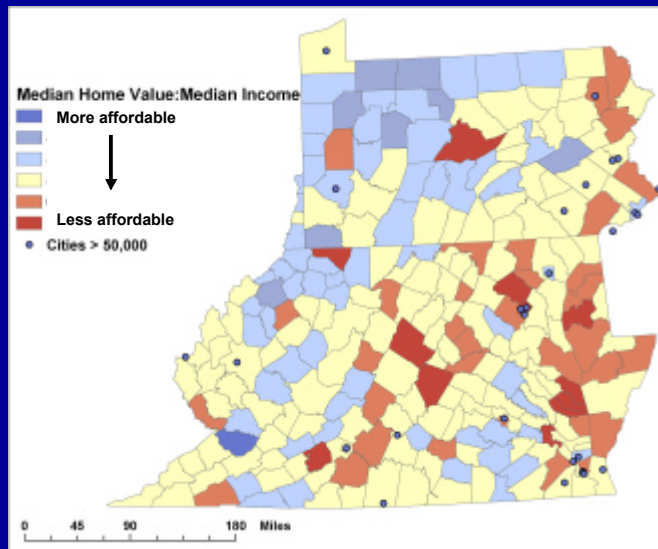

## Housing Opportunities

- Owner-occupied
- Rent > 30% of income (stressed households)
- Ratio of median home value to median per capita income (affordability)
- Change in median home value : income (trends in affordability)
- Net commuting

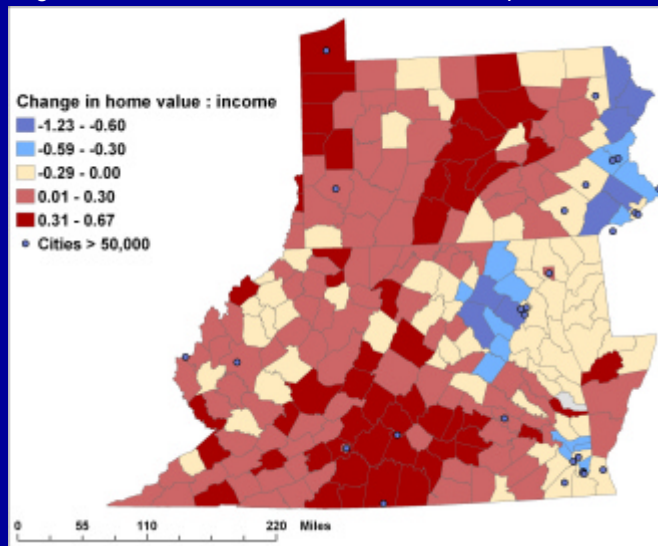

## Housing Affordability

Ratio of Median Home Value to Median Per Capita Income

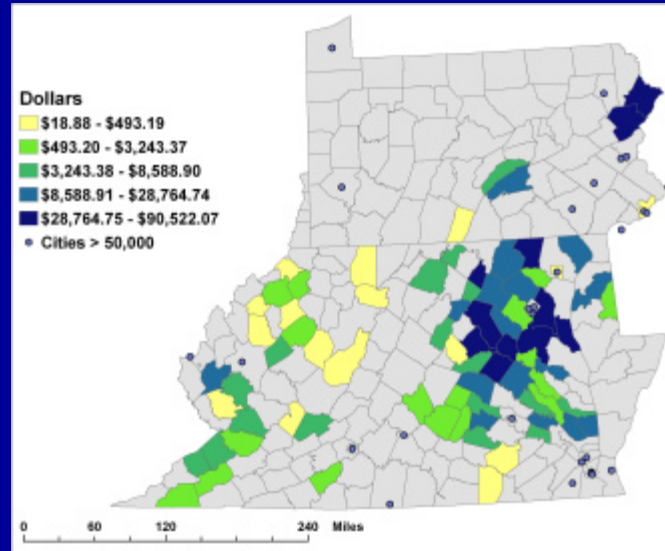

## Trend in Housing Affordability

Change in Median Home Value to Median Per Capita Income Ratio

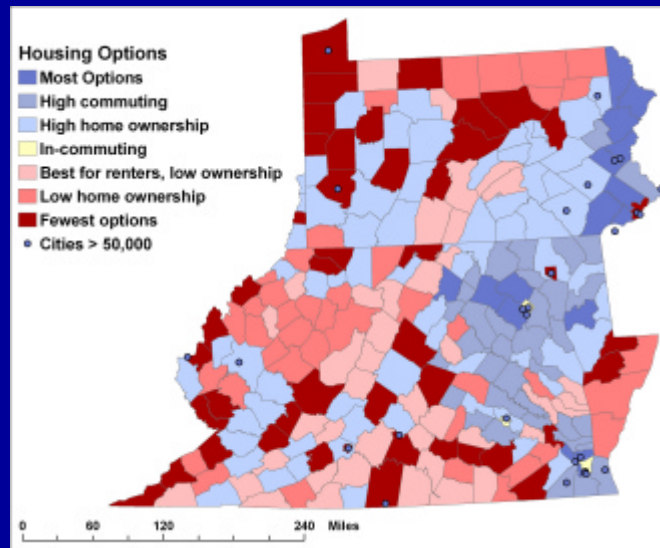

## Time Costs of Sprawl: Value of extra time spent commuting from "sprawl" areas

Source Data: Census 2000

## Housing Option Ratings

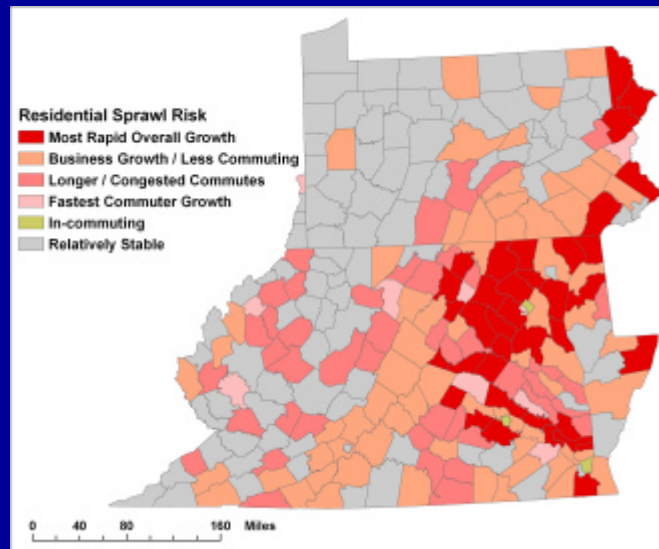

## Future Trends: Natural Amenities as Drivers of New Settlement Patterns

- Areas formerly characterized by
  - Population decline or slow growth
  - Declining dependence on resource jobs (agriculture, forestry, fisheries)
- Now attracts:
  - Businesses not tied to particular resources or markets
  - Amenity-seeking retirees
  - Self-employed or “distance” commuters
  - “Natural restoration” industries

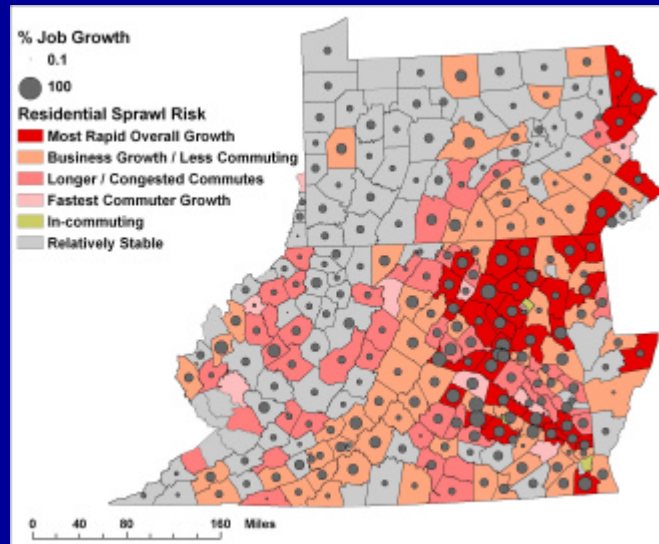

## Indicators of Amenities

Desirable Features	Markers of Change
<ul style="list-style-type: none"><li>• Suburban Residential<ul style="list-style-type: none"><li>– Affordable housing</li><li>– Low Crime</li></ul></li><li>• Rural Amenity-seekers<ul style="list-style-type: none"><li>– Seasonal homes</li><li>– Protected area</li><li>– Area in water</li></ul></li></ul>	<ul style="list-style-type: none"><li>• Suburban Residential<ul style="list-style-type: none"><li>– More out-commuting</li><li>– Longer travel to work</li></ul></li><li>• Rural Amenity-seekers<ul style="list-style-type: none"><li>– Increasing % retirees</li><li>– Increasing seasonal homes</li></ul></li></ul>

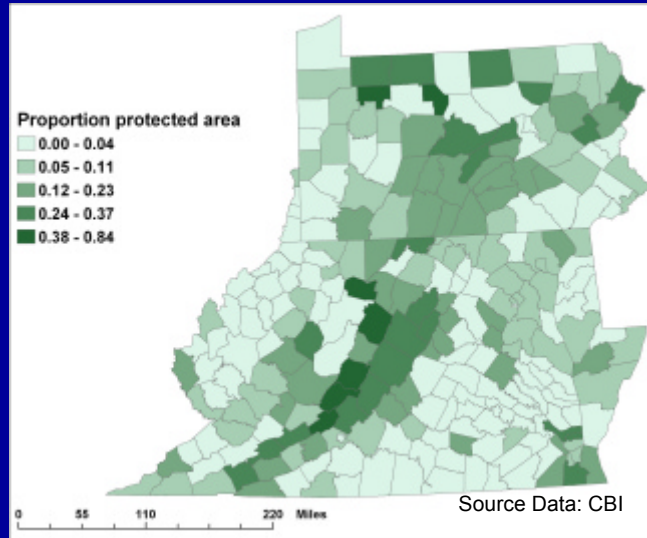

## Residential Development Risk

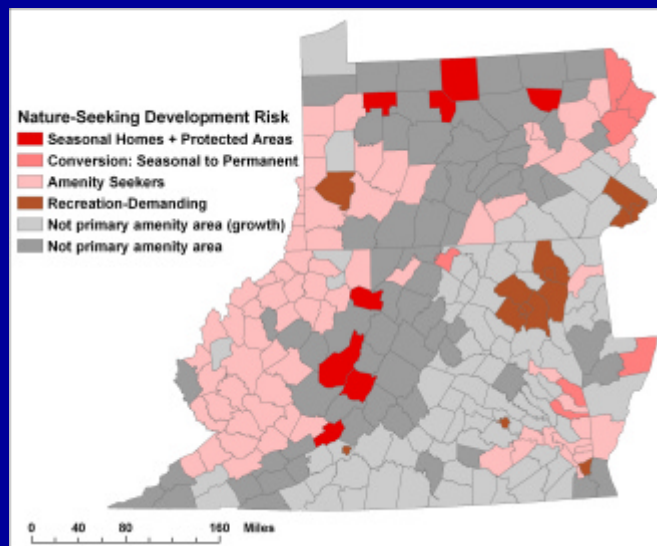

## Residential Development Risk Compared with Percentage Change in Jobs (1990-2000)

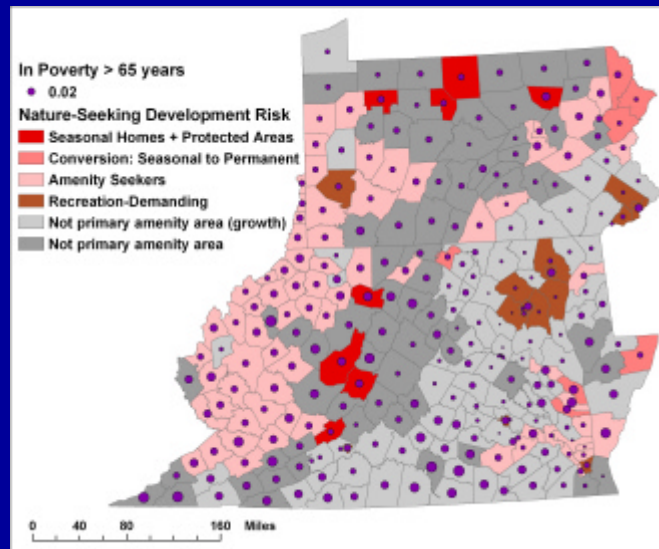

Protected Area:  
Federal, State, County and Private Land Holdings  
(incomplete data)

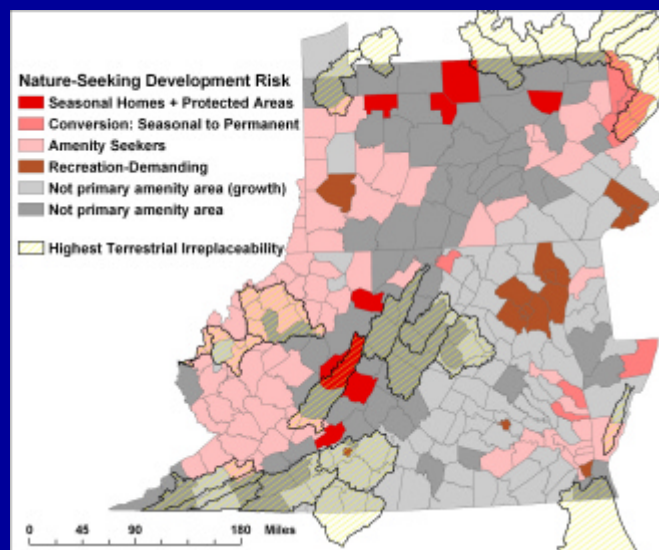

Amenity-Seeking Development Risk

## Amenity-Seeking Development Risk Compared with Proportion of Individuals > 65 in Poverty

## Highest Terrestrial Irreplaceability and Risk from Amenity-Driven Development

## Conclusions for ReVA/MAIA region

1. Regional data sets can be used to track conditions and potential drivers of change
2. Direct economic links to natural resources are weak overall and declining, but resource jobs are locally important
3. Evidence of emerging risks to ecosystems from amenity-seeking migrants
